INTRODUCTION

The U.S.S.R., PRC, and the countries of Eastern Europe (E.E.) are the world's major centrally planned economies (CPE) and constitute a potential market of more than 1.3 billion people.

While the bulk of U.S.S.R. and Eastern European trade is intra-bloc, i.e. with each other, the portion with countries outside the bloc is rising to the point where the U.S.S.R. and Eastern Europe are becoming increasingly important markets for the United States and other trading nations.

As the PRC begins to play a more active role in world affairs, a revival of Western interest in trade is certain. What remains unknown is the extent to which the PRC will expose its economy and culture to Western influence. In 1976, U.S. trade with the PRC reached $337 million. If for no other reason, the sheer magnitude of its population renders the PRC a potential market that cannot be ignored.

By 1976, U.S. trade (imports and exports) with the CPE's totaled $4.7 billion, a dramatic increase from the predetente, 1971 level of only $650 million. However, there appears to be opportunities for further U.S. expansion. While other industrialized nations of the Western world captured 29 percent of communist trade in 1976, the U.S. share was only 2.5 percent. In light of the 12 percent U.S. share in world trade, there is obviously room for further U.S. penetration into the communist markets.

This publication presents economic data intended to provide some insight into the potential of the U.S.S.R., the PRC, and the Eastern European markets for U.S. goods and services. It summarizes trade patterns between the centrally planned economies and the United States and other Western industrialized nations. Background economic and population data for CPE's are included to show their development patterns and potentials.

The reader should be aware of the limitations of this publication. Most data are necessarily highly aggregated and may not provide the level of detail that individual users require. While most of the data is complete through 1976, some gaps do occur in cases where timeliness of publication outweighed the desire for completeness.

Data pertaining to the "Industrialized West" (I.W.) were obtained chiefly from the United Nations. U.S. figures were compiled from U.S. Department of Commerce sources. Economic and population data of the CPE's were provided by other U.S. Government agencies. Use of these different sources may cause slight inconsistencies in some instances.

This annual publication is the fifth in a series and was prepared by Jacqueline Bell with the assistance of Dorde Cedic and Corbin Lyday of the Office of East-West Trade Policy and Planning, Bureau of East-West Trade, U.S. Department of Commerce. Comments and suggestions on the content are invited and should be addressed to:

DEFINITIONS AND ABBREVIATIONS

Eastern Europe (E.E.)	-	Bulgaria, Czechoslovakia, GDR, Hungary, Poland, Romania
GDR	-	German Democratic Republic
PRC	-	People's Republic of China
Centrally Planned Economies (CPE's)	-	U.S.S.R., PRC, Eastern Europe
Industrialized West (I.W.)	-	Austria, Belgium-Luxembourg, Canada, Denmark, Federal Republic of Germany (FRG), France Italy, Japan, Netherlands, Norway, Sweden, Switzerland, United Kingdom and United States
Other I.W.	-	I.W. less U.S.
Other	-	Countries not included in the categories above
EM-522	-	Bureau of Census Magnetic Tapes (export data)
IM-145	-	Bureau of Census Magnetic Tapes (import data)
SITC	-	Standard International Trade Classification

1/Estimates for the U.S.S.R. and Eastern Europe are based on the value of crop production plus the value of livestock products, with allowance for changes in livestock numbers, but minus feed (including grain imported for feed) seed, and waste. For the U.S.S.R., 1970 average realized prices are used to weight the indexes. For Eastern Europe, FAO/Eastern European and Soviet wheat-based price relatives for 1961-65 were used to compute the indexes. Estimates for the PRC are based on grain and cotton production.

2/These indexes are measures of the "gross" value of production of industry at constant prices. The gross value of production is, in general, the sum of the value of output of all industrial enterprises. The definition of industry in Communist countries includes not only manufacturing, mining, and public utilities, as in most Western definitions of industry, but also certain other activities (varying from country to country).

3/Estimates computed by applying value added weights to data for commodity production. The data are fragmentary and uncertain. Therefore, the index should be regarded as providing only a tentative indication of the general level and trend in production.
